TV/DVD/VCR COMBINATION

2001

PV-DF2700/PV-DF2000

TV/DVD/VCR Combination

- 27"/20" Diagonal PureFlat™ Picture Tube
- 2-Tuner with PIP (PV-DF2700)
- Options for DTS® and Dolby Digital™ Decoders
- Built-in DVD Player
- In 4-Head Hi-Fi VCR
- FM Radio with Auto Scan
- Simulated Surround Sound

With the Panasonic PV-DF2000 or PV-DF2700 TriplePlay™ TV/DVD/VCR combination, you'll experience a world where sound surrounds you and images are clear as life. Plus, you'll also discover a world where the breathtaking sights and sounds of the movies are brought to you in a complete entertainment unit. Panasonic makes it possible to have a high quality 20" or 27" Diagonal TV with a built-in DVD player and VCR so you will always have the components of a great home theater at your finger tips.

PureFlat™ Picture Tube

The PureFlat picture tube delivers natural and accurate images from corner to corner, free from the distortion that can occur with conventional curved screens. This virtually flat screen produces minimal reflections and renders images that are clear and distortion-free no matter where you sit in the room. So you are almost guaranteed to get the picture you deserve!

Multiple DVD Viewing Options*

The DVD player built into the combo unit offers a variety of exciting viewing options, all of which are dependent on the DVD movie disc that you're watching. You can view a movie with up to eight different languages or with subtitles in up to 32 languages. And, you may even have the option of switching between multiple camera angles for a whole new perspective.

Outputs for DTS® & Dolby Digital™ Decoders

Many of today's movies rely on a soundtrack that envelops the viewer to bring all of the action to life. That's why our TV/DVD/VCR combinations have outputs for optional DTS and Dolby Digital surround sound decoders. They provide six discrete channels of exhilarating digital audio that deliver the ultimate sound experience.

4-Head Hi-Fi VCR

The built-in VCR offers the excitement of true, high fidelity stereo sound with a dynamic range of more than 90 decibels. And, with two of its four video heads dedicated for recording and playback in the SP speed, and the other two for SLS, you'll enjoy outstanding picture quality in both speeds.

Built-in Simulated Surround Sound

Even without an elaborate home theater system you will still be able to enjoy the thrilling sounds of any movie thanks the Simulated Surround Sound feature. Creating the surround sound effect by simulating surround-channel sounds by using only the two front stereo speakers, you will get a full cinematic experience!

Stereo TV

Thanks to its impressive Stereo TV sound system, you can experience true home theater audio through the PV-DF2000 or PV-DF2700 stereo speakers. The built-in MTs tuner enables the combo units to receive stereo television broadcasts, while a Separate Audio Program (SAP) channel allows the light-impaired to enjoy specially-mixed TV broadcasts from Descriptive Video Services (where available). In some areas, SAP provides dialogue in another language.

FM Radio with Auto Scan

The PV-DF2000 and PV-DF2700 feature a built-in FM radio with a nine preset-station memory and an on-screen display for station confirmation. In addition, these units are now equipped with

Auto Scan which allows you to quickly search through FM radio stations until you find the station of your choice.

Light Tower™ Illuminated Remote

At the touch of a button, much of the Light Tower remote's keypad will light up for the seconds, so you can easily manage it in a darkened room. And, thanks to a flattened base, the remote can even stand upright!

Alarm Clock

The alarm clock feature consists of a sleep timer, on-timer and wake-up alarm. The built-in clock timer lets you set the PV-DF2000 or the PV-DF2700 to turn off on automatically so you can fall asleep to be awakened by a DVD movie, videotape, TV program, music CD or FM radio station. You can even set the alarm to wake you with a traditional alarm clock beeping sound.

VCR Plus+®

With the VCR Plus+ feature and the PlusCode® numbers published in over 500 magazine TV listings throughout the country, as well as in every edition of TV Guide®, programming these combo units is simple. After you enter the respective PlusCode number for the program you want to record, the timer is set.

Velocity Modulated Scan and 3-Line Digital Comb Filter

The Velocity Modulated Scan feature speeds up and slows down the black and white portion of the signal, resulting in sharp dark-to-light transitions and outstanding

PV-DT2720 Optional TV/DVD/VCR Combination Stand

This optional stand is a great way to enhance your entertainment experience. Great for living room, perfect for bedroom. Specially designed for PV-DF2000 and PV-DF2700 36" high units.

edge definition. The 3-Line Digital Comb-Filter feature minimizes dot crawl and cross color interference. With both these features included you will enjoy amazing picture quality.

2-Tuner with P-I-P

With two built-in tuners you can watch two TV programs simultaneously. You can monitor fast-breaking news events while watching a movie on the DVD player or VCR. Or, keep track of two sporting events happening at the same time.

Auto Gain Control

With Auto-Gain Control, you will never have to worry about the volume being too loud when switching from one component to another.

The Perfect Combination: TV, DVD, VCR in One!
