fusion HEATED ROLLERS™ heated ionic rollers a fusion of technologies [Order Status](#)

Home Features Before & After FAQ Order Now

**FEATURES**

*Long-lasting Curls and Bouncy, Shiny Hair in Minutes*

Fusion hot rollers use ionic technology to add lift, volume and shine to hair. They're the fast, easy way to get salon-style results at home. Fusion rollers give you healthy-looking hair and long-lasting curls that won't brush out.

- FUSION PTC HEAT TECHNOLOGY**  
Each Fusion roller contains its own, long-lasting PTC heating element. They heat up quickly and uniformly from end to end, and retain the heat longer than conventional hot rollers.
- IONIC HAIR CARE**  
The Fusion rollers use 32 powdered minerals, which are baked right into the rollers, plus infrared and wave motion technologies. These technologies work together to generate hydrating negative ions that moisturize the hair and give it body and shine.
- ERGONOMIC DESIGN**  
The rollers are designed to firmly grip the hair for rolling. The ends of the rollers remain cool to the touch, so you don't have to worry about burning your fingers as you roll your hair. Sturdy butterfly clips secure the rollers in place.
- 2 SIZES FOR DIFFERENT HAIR LENGTHS**  
Use the 2 1/2-inch rollers for short and medium-length hair, and the 5-inch rollers for long hair.

**60-day Money Back Guarantee**

Home Features Before & After **FAQ** Order Now

**FAQ**

- HOW DO THE FUSION ROLLERS DIFFER FROM OTHER HOT ROLLERS?**  
Fusion rollers employ a fusion of the latest PTC heating and ion-generating technologies. Each individual roller has a PTC heating element inside.
- WHAT IS PTC HEATING?**  
Positive Temperature Coefficient (PTC) is a new heating technology for providing controlled electrical heat. Long-lasting PTC elements heat up quickly and uniformly, and retain heat longer.
- WHAT IS IONIC TECHNOLOGY?**  
It's believed that hair can become positively charged due to damage, chemicals, and static electricity. Fusion hot rollers produce negative ions to counter these problems. The ions are generated from the rollers themselves, which contain 32 baked-in mineral powders, plus infrared and wave motion technologies.
- WHAT ARE THE BENEFITS OF NEGATIVE IONS?**  
Negative ions pull in moisture from the air and infuse it into the hair strands. Hair is left voluminous, shiny, and healthy-looking. Using an ionic styling tool is actually good for your hair.
- HOW LONG DOES IT TAKE THE ROLLERS TO HEAT UP?**  
It takes approximately 3 – 5 minutes for the rollers to reach optimal temperature.
- HOW WILL I KNOW WHEN THE ROLLERS ARE READY TO USE?**  
The red indicator light on the base unit will turn off when the rollers have heated.
- HOW LONG SHOULD I LEAVE THE FUSION ROLLERS IN MY HAIR?**  
For optimal results, leave the rollers in for at least 5 minutes.
- HOW LONG WILL THE ROLLERS REMAIN HOT?**  
The rollers retain their heat for approximately 18 minutes.
- DO THE ENDS OF THE ROLLERS GET HOT?**  
No. The ends of the roller remain cool to make rolling your hair even easier.
- CAN THE FUSION ROLLERS BE USED ON ANY HAIR TYPE?**  
Yes. Fusion rollers are great for hair of any thickness or texture, even colored or chemically treated hair. The rollers' ionic moisturizing property is actually good for your hair.
- CAN I BRUSH MY HAIR AFTER USING FUSION ROLLERS?**  
Yes. Fusion rollers produce long-lasting, voluminous curls that will stand up to brushing.
- WHAT SIZE ROLLERS SHOULD I USE IN MY HAIR?**  
Fusion heated rollers come in a 2 1/2-inch length for short and medium-length hair, and a 5-inch length for long hair.
